Press release

Astura advises French cleantech Tallano Technologie in its fundraising for an amount of 17.7 million euros

Founded in 2012 by Christophe Rocca-Serra, Tallano Technologie develops a unique solution to collect particles emitted by the abrasion of brake pads, which applies to the road sector (cars and heavy vehicles) and rail sector (trains and subways). This innovative technology allows to reduce up to 90% of the particles coming from braking, which are one of the main sources of pollution of vehicles and trains nowadays.

After several fundraisings in 2016 and 2019, Tallano Technologie is accelerating its development in 2021. It has just closed a fundraising round of approximately €17.7 million from institutional investors, impact funds and existing shareholders.

This fundraising marks the entry into Tallano Technologie's capital of major players in the environmental transition, including Mirova, Bpifrance, Veolia and several European family offices.

Astura advised Tallano Technologie on the legal aspects of the transaction, with Raphaël Dalmas (M&A partner), Matthieu Mélin (IP/IT partner), Alma Nicolai and Margot Blondel (M&A associates). Alexander Partners was Tallano Technologie's financial advisor, with Alexandre Carré de Malberg. The pool of institutional investors was advised by Spark Avocats on legal aspects.

With its technology TAMIC, which already equips a train of the French RER C (SNCF) and is intended to be deployed on the Japanese and Korean railway networks and the vehicles of European car manufacturers, Tallano Technologie stands out as a major player in the fight against air pollution.
